

# DOES YOUR RESPIRATOR PROTECT YOU?

For more information  
please see ASA PS21

The only way to know if your respirator is protecting you is to be **FIT-TESTED**.

**FIT-TESTING** is required by the Australian Standard on Respirators. **FIT-TESTERS** will warn you about the impact of facial hair in obtaining an adequate seal.

**FIT-TESTING** can only be performed by a trained **FIT-TESTER**.

## GET FIT-TESTED

Ask your employer or workplace now about providing **FIT-TESTING**.

If you are refused, notify your local Health & Safety Representative  
or Health & Safety Regulator
