

DOES YOUR RESPIRATOR PROTECT YOU?

The only way to know if your respirator is protecting you is to be **FIT-TESTED**.

Fit-testing is required by the Australian standard on respirators. Fit-testers will warn you about the impact of facial hair in obtaining an adequate seal.

Fit-testing can only be performed by a trained fit-tester. For more information please see ASA PS21

GET FIT-TESTED

Ask your employer or workplace now about providing **FIT-TESTING**.

If you are refused, notify your local Health & Safety Representative or Health & Safety Regulator
